

Silver Surfers @ Bedford Vocality Project Training 2007

Session 3 – Teaching Digital Photography to Older Learners

Printing Your Pictures

The computer will help you print your pictures and offer you options when you open your picture folders.

On the left hand side of the folder view you will be offered an option to **Print this picture**. You select this option by clicking once on it.

The **Photo Printing Wizard** will then guide you through the printing of the picture.

You need to read the wizard instructions.

Click the Next button when you have finished each stage.

Firstly you will be asked to select the pictures you wish to print. You may **Select All** or **Clear All** selections.

You may select the picture individually (**the best option if you have lots**) by clicking in each box next to the picture. A green tick will be displayed.

(This is a picture of Sylvester my Maine Coon cat)

The wizard will then ask which printer you wish to use. Normally your printer will be displayed here.

You may also set properties for your printing from this screen.

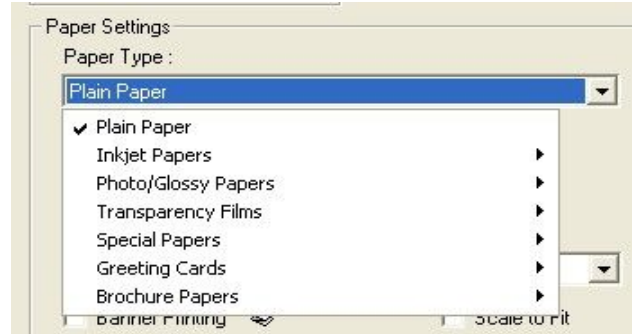

Your prints will look best if you select the correct paper before printing. To select paper, click Printing Preferences.

Printing Preferences

Silver Surfers @ Bedford Vocality Project Training 2007

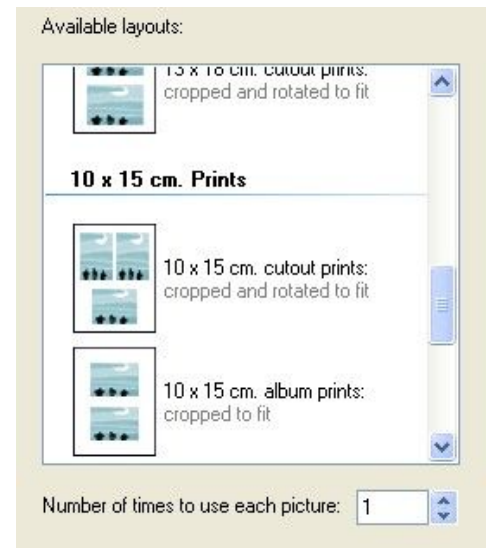

Session 3 – Teaching Digital Photography to Older Learners

From the **Printing Preferences** you may set your paper type

Choose your paper type and then click Ok and go on to the next screen to select the layout of your picture print.

You are offered several options – try some out on plain paper first.

Finally print your picture!!!

!! If you have a draft option on your printer use this to try out your prints on plain paper first to save ink and reduce the cost of wasted photographic paper.

!! If you are unsure of the picture position and size on the page then print in grayscale first to save ink and your money.
